Services we offer

CONSULTATION

Our staff provides professional and technical assistance in planning, preparation, automation, layout and design of forms, publications, electronic interface requirements and capabilities, and other printing related services or products.

COMPOSITION

Various composition, copy preparation, scanning of illustrations, and related design services, including setting type by electronic character generating devices, phototypesetting and strike-on are available.

AUTOMATED PUBLISHING AND PRINTING SERVICE (APPS)

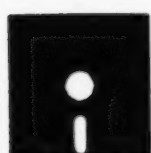

Automated Publishing can provide you with high quality, typeset publications, directives, print-on-demand services, and other data from copy prepared on most word processing equipment or personal computers. NPPS network installations offer a variety of methods for data transfer from customer locations via telephone modem, or as a resident of a local area or broad band network. Media conversion of floppy disks, scanning, text generation, raster scanning and graphics services are available. In the future high speed raster printing will be available.

ELECTRONIC PUBLISHING AND PRINTING SERVICE (EPPS)

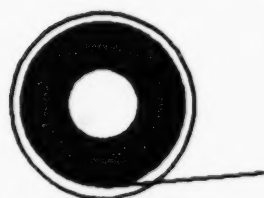

Electronic page printing is the production of printing on demand via high-speed printers. Our EPPS accepts most 9-track computer tapes and electronic transmission (via modem or as a resident on a local area network) of data for printing hard copy. System capabilities include multiple type-fonts, duplexing, and quadruplexing. Product finishing such as covers, drilling, banding and shrink wrapping are also available.

Below are graphic depictions of the types of input we can accept for production at the Navy Publishing and Printing Service Branch Office, Building 19, CBC, Port Hueneme.

Magnetic Input

8", 5 1/4", 3 1/2"
Floppy Disks
(Wang, Xerox 860,
Viewpoint, IBM) Over
900 different formats
available)

1/2" 9 track
Magnetic Tape

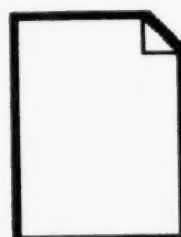

Asynchronous/
Bisynchronous
Telecommunications

Printed Input

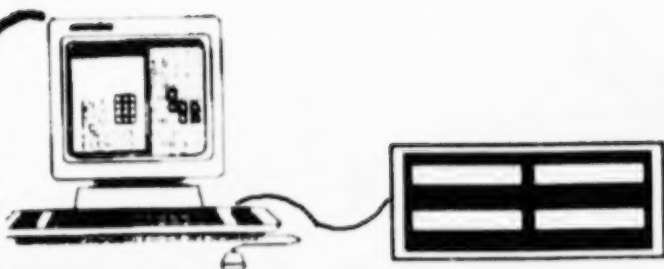

Printed
Booklets & Manuals

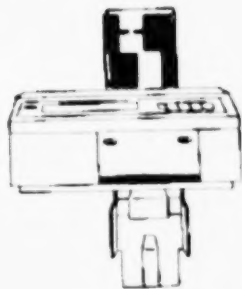

Printed
Graphics, Clipart,
Photos, Text
Pages, etc.

Once the information is received by the workstation, the operator can format; enhance the image with a variety of typefaces, reposition text, or insert graphics either scanned or created on the screen. Finished copy for forms are also produced using the graphics frame to create various type sizes and formats in accordance with Navy design standards.

Proof copies are provided as requested.

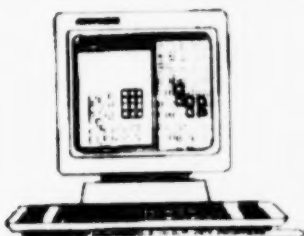

Media Conversion Unit
 (1/2" 9 track magnetic tape, 8", 5 1/4", 3 1/2" floppy disks) Converts disk to disk, disk to tape and disk to composition workstation.

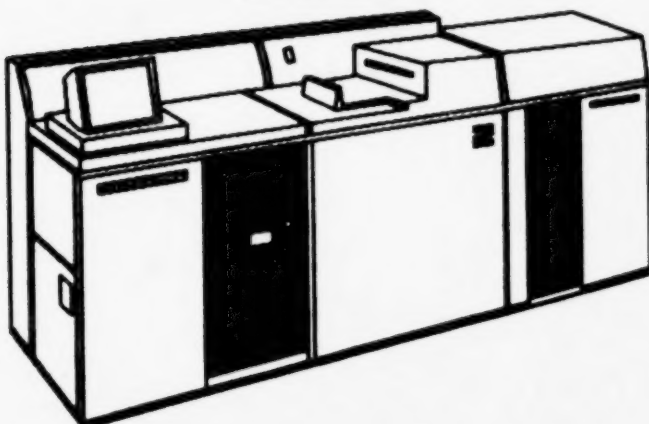

Document Scanner
 (Intelligent Character Recognition/Graphics/Graytone Scanner)

Production Units

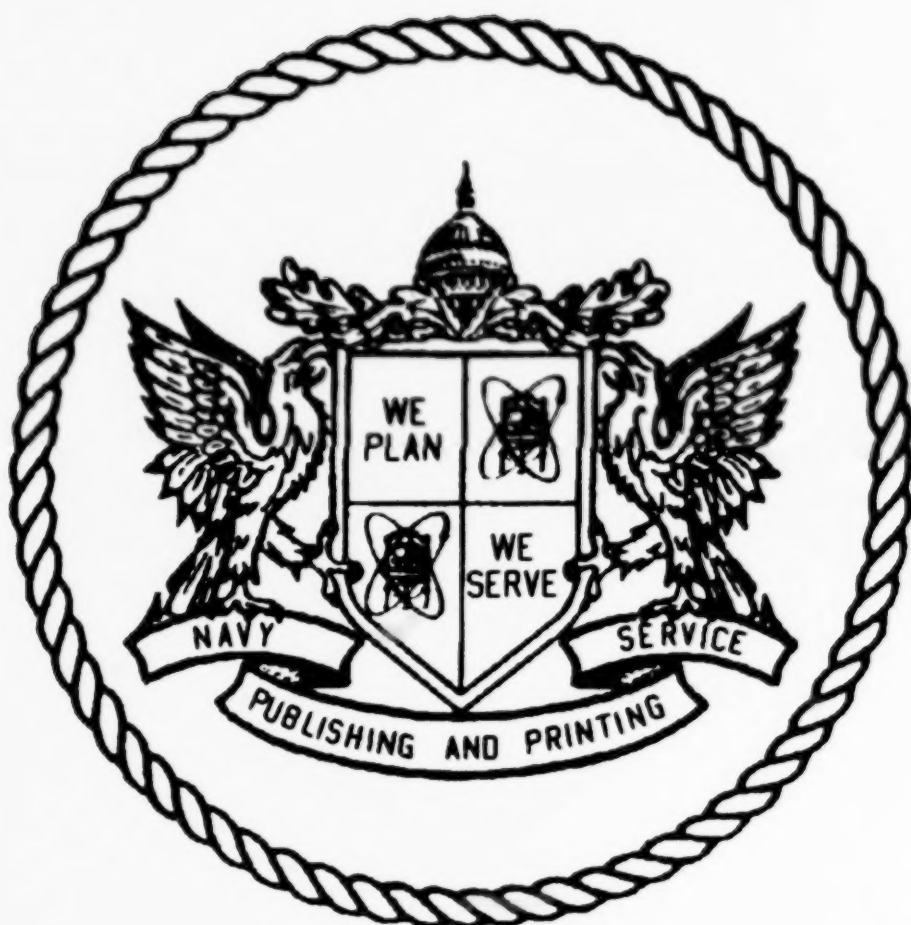

Workstations
 (Composition work; bulletins, newsletters, technical manuals, forms, etc.)

Printed Output

High Speed Printers (92 page per minute, 8 1/2 X 11, 20# bond-110 index, duplexing, covers, slip sheets, on-line stitching)

Navy Publishing and Printing Service

The Navy Publishing and Printing Service is the central publishing and printing management organization serving the Department of the Navy. Operating on an independent, total cost recovery basis, we produce or procure all of the Navy's publishing and printing requirements. All services are provided in compliance with the policy and guidance contained in the Navy Publishing and Printing Regulations, NAVSO P-35.
